

Sales & Revenue Analysis Dashboard Project Report

Professional Internship Project Report based on Sales Dashboard Dataset and Excel Dashboard Analysis.

1. Project Overview

This project focuses on building an interactive Sales & Revenue Analysis Dashboard using Excel and CSV-based sales data. The dashboard helps analyze revenue trends, top-performing products, and key business KPIs to support data-driven decision making.

2. Project Objectives

- Import and process sales data from CSV files.
- Create KPI-based sales analytics.
- Build visual charts for trend analysis.
- Identify high-performing products/categories.
- Generate actionable business insights.

3. Dataset Summary

Total Records: 100

Numeric Columns Detected: Quantity, Unit_Price, Revenue

Category Columns Detected: Order_ID, Date, Product, Region

4. Key Performance Indicators (KPIs)

KPI	Value
Total Sales	282
Average Sales	2.82
Maximum Sales	5
Minimum Sales	1

5. Top Performing Categories / Products

Order_ID	Quantity
ORD0042	5
ORD0046	5
ORD0072	5
ORD0050	5
ORD0093	5

6. Dashboard Features Implemented

- Interactive Excel Dashboard Structure
- KPI Tracking Metrics

- Revenue Trend Analysis Charts
- Product Performance Visualization
- Structured Business Reporting Format

7. Conclusion

The Sales & Revenue Analysis Dashboard project successfully demonstrates data visualization, KPI tracking, and business insight generation using Excel and Python-supported reporting techniques. The project provides a professional analytics workflow suitable for internship and academic presentations.
